## Reg.No.: 21MIS1044

#### Name: Srinivasan JP

The single link clustering in the Hierarchical Clustering executed below

```
In [ ]: # Importing the libraries
  import numpy as nm
  import matplotlib.pyplot as mtp
  import pandas as pd
```

Mall data set going to be used by both the Single cluster and Complete link cluster

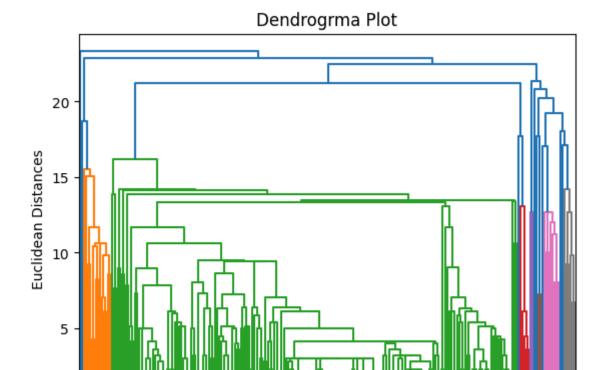

```
In [ ]: # Importing the dataset
dataset = pd.read_csv('./mall/Mall_Customers.csv')
```

Extracting the required features

```
In [ ]: x = dataset.iloc[:, [3, 4]].values
```

Plotting the dendrogrma

```
import scipy.cluster.hierarchy as shc
dendro = shc.dendrogram(shc.linkage(x, method="single"))
mtp.title("Dendrogrma Plot")
mtp.ylabel("Euclidean Distances")
mtp.xlabel("Customers")
mtp.show()
```

single link modle defining with the 5 clusters

```
In [ ]: #training the hierarchical model on dataset
from sklearn.cluster import AgglomerativeClustering
hc= AgglomerativeClustering(n_clusters=5, linkage='single')
```

Customers

model fitting to the dataset

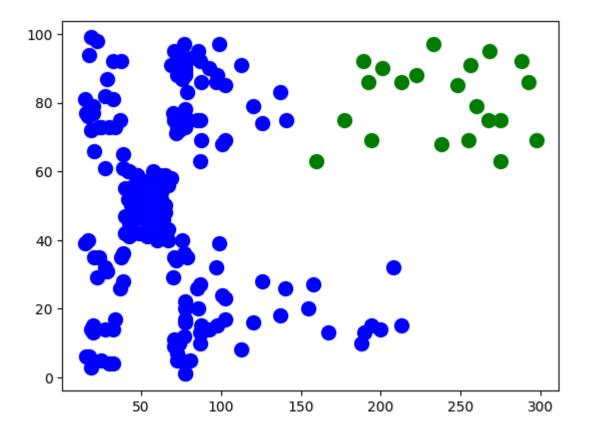

0

```
In [ ]: y_pred= hc.fit_predict(x)
```

Plotting the predicted data

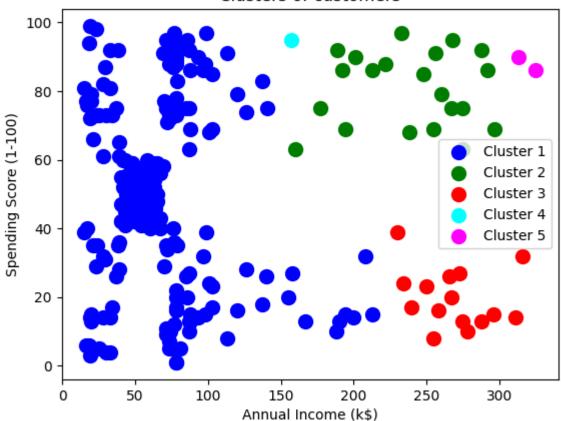

```
In [ ]: mtp.scatter(x[y_pred == 0, 0], x[y_pred == 0, 1], s = 100, c = 'blue', label = 'Cluste'
mtp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Cluste'
```

Out[ ]: <matplotlib.collections.PathCollection at 0x2420e61e390>

```
In []: mtp.scatter(x[y_pred == 0, 0], x[y_pred == 0, 1], s = 100, c = 'blue', label = 'Cluste'
mtp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Cluste'
mtp.scatter(x[y_pred == 2, 0], x[y_pred == 2, 1], s = 100, c = 'red', label = 'Cluste'
mtp.scatter(x[y_pred == 3, 0], x[y_pred == 3, 1], s = 100, c = 'cyan', label = 'Cluste'
mtp.scatter(x[y_pred == 4, 0], x[y_pred == 4, 1], s = 100, c = 'magenta', label = 'Clu
mtp.title('Clusters of customers')
mtp.xlabel('Annual Income (k$)')
mtp.ylabel('Spending Score (1-100)')
mtp.legend()
mtp.show()
```

#### Clusters of customers

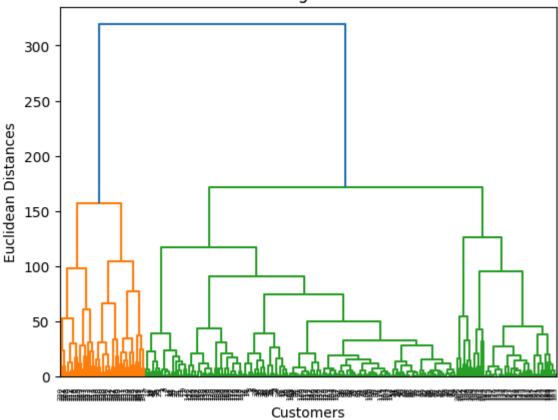

# **Complete link clustering**

using the same data set with is defined for single link cluser

```
In []: import scipy.cluster.hierarchy as shc
  dendro = shc.dendrogram(shc.linkage(x, method="complete"))
  mtp.title("Dendrogrma Plot")
  mtp.ylabel("Euclidean Distances")
  mtp.xlabel("Customers")
  mtp.show()
```

### Dendrogrma Plot

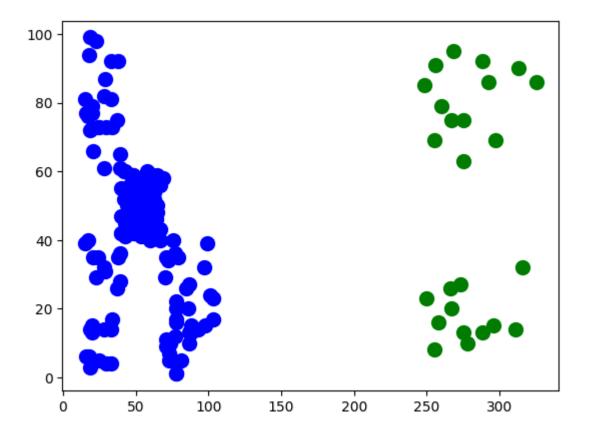

Defining the complete link cluster

```
In [ ]: #training the hierarchical model on dataset
from sklearn.cluster import AgglomerativeClustering
hc= AgglomerativeClustering(n_clusters=5, linkage='complete')
```

fitting with the cluster

```
In [ ]: y_pred= hc.fit_predict(x)

In [ ]: mtp.scatter(x[y_pred == 0, 0], x[y_pred == 0, 1], s = 100, c = 'blue', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Clustematp.scatter(x[y_pred == 1, 0], x[y_pred ==
```

Plotting the result of the predition

```
In []: mtp.scatter(x[y_pred == 0, 0], x[y_pred == 0, 1], s = 100, c = 'blue', label = 'Cluste'
mtp.scatter(x[y_pred == 1, 0], x[y_pred == 1, 1], s = 100, c = 'green', label = 'Cluste'
mtp.scatter(x[y_pred == 2, 0], x[y_pred == 2, 1], s = 100, c = 'red', label = 'Cluster'
mtp.scatter(x[y_pred == 3, 0], x[y_pred == 3, 1], s = 100, c = 'cyan', label = 'Cluste'
mtp.scatter(x[y_pred == 4, 0], x[y_pred == 4, 1], s = 100, c = 'magenta', label = 'Cluste'
mtp.title('Clusters of customers')
mtp.xlabel('Annual Income (k$)')
mtp.ylabel('Spending Score (1-100)')
mtp.legend()
mtp.show()
```

### Clusters of customers
